

An open letter to all Billionaires

Billionaires get solicited all the time with unusual requests, this one is the most unusual because it deals with research in the cognitive sciences run and managed by a consortium of colleges and universities. The resultant research has the potential to be transcendent. A consortium of universities is seeking 450 million dollars to study aspects of cognition including awareness after permanent bodily death. Your death after all is simply a data transfer and you after all are simply data. The model of uploading data to the cloud and back is the same model as you dying, going to heaven and coming back to a new body. The only difference is the amount of the data. By 2050 we will be able to upload and download to the cloud more data than in the human body.

All discoveries related to intellectual property are to be put in a corporation whose owners will include the 90 billionaires, the universities in the consortium and the researchers. The information about who what where and how is all laid out on the www.iasor.org web site. Visit the map of consciousness on our web site so you can see how this science is evolving.

You as investor/doners get founding shares in this corporation, the right to name your chair at the university who will receive your donation, it is after all tax free, and the area of research you wish to support within the consciousness sciences. These include, transgender research, military applications, non-local consciousness, quantum biology and many more. What makes this endeavor so inviting and exciting is that all aspects are to be integrated into one model of consciousness by the researches themselves through interdisciplinary studies.

And therein is the overriding reason to invest, a true model of consciousness not in just the 3 spatial dimensions we inhabit, but rather in the 4 we observe. The word for this research, transcendent. The business opportunities are abundant and the political, military and social consequences of this research cannot be ignored. These are risks we all face, what risks do we all take? 90 of the 2000 plus billionaires is all we will take on this first tranche. Talk to us today e-mail Goodproducts@aol.com
