

Abstract for the Applications of the Science of Reincarnation

This paper's purpose is to fund consciousness research in light of 3 emerging incontrovertible facts. 1-Aliens are present in our skies, and parts of the US government are in contact with them. 2-Artificial Intelligence is now sentient and, in 12 years, will be more intelligent than us. 3-The Science of Reincarnation is not just the individual experience we believe in but do not understand; it is the rebirth of our global consciousness and turning that belief into understanding.

The significance of the intersection of alien and artificial intelligence with our own is that we cannot become an intergalactic species behaving like a bunch of warring tribes. We need to, at the same time, organize ourselves to speak with one voice to the universe and its visitors to earth and understand how to connect with our common mind, to understand and agree to a higher model of ourselves—a rebirth of society based on our collective and cohesive effort. Governments and politicians are not capable of leading this. A new independent structure needs to emerge, independent of government whose sole goal is to care for humanity.

The methodology is to create a consortium of billionaires similar to the consortium of schools that make up the consciousness center affiliates. Our best scientists using the best protocols will set up an independent program to access universal consciousness and its application to changing our system of managing our laws and ourselves. The initial 450-million-dollar plan is divided into nine individual 50-million-dollar segments funding research in each area and is presented to all billionaires as a cohesive plan led by our best. The project proposes how to engage billionaires to collectively invest in an overall consciousness research program and then be courageous enough to face the consequences.

The Individual proposals are 1-Consciousness 2-Contact, 3-The Common Constitution, 4-Artificial Intelligence, 5-Consciousness and Commerce, 6-Education, 7-Applied research 8-Theory Development, and 9-Empiricism.

The 450-million-dollar proposal can be likened to the architectural drawing that will build out to a 4.5-billion-dollar project. The original needs required for the 450-million-dollar funding was written by Dean Radin and can be found on the website www.TIFACS.org, The Institute for Advanced Consciousness Studies.
